

ABOUT IPERION

Iperion provides market-tailored and effective products and services focused on information systems, GxP cloud computing solutions and consultancy for various markets in the life sciences industry: pharma/biotechnology, medical devices, and health care industry. Furthermore Iperion provides solutions for contractors and suppliers.

From the beginning quality management and computerized system validation have been at the basis of our products and services offerings. We are dedicated to life sciences and understand the importance of being compliant.

With a team of highly skilled professionals we work closely together with our customers to establish and maintain the best possible systems and infrastructure solutions.

Both excellent results on compliance audits as well as high customer satisfaction ratings underline the appreciation the market has for our expertise, creativity and drive. Iperion has been ISO certified whereas our quality and security management comply with the requirements of ISO 9001:2008 and ISO 27001:2013.

INFORMATION SYSTEMS

We strive to deliver the right solution to the right customer. Our quality management system (QMS) belongs to the best in class of its respective area. The extensive possibilities allow you to streamline and manage activities, tasks and processes that normally require a lot of capacity and monitoring. Our services range from technical installation, configuration, training, validation all the way to maintenance and support and have been key in numerous successful implementations.

We strive to deliver the right solution to the right customer.

GxP CLOUD COMPUTING

GxP cloud computing and private cloud infrastructure by Iperion provides you with an IT Platform that is qualified according to the GAMP Good Practice Guide "IT Infrastructure Control and Compliance". Iperions data centers offer layers of security and we are constantly vigilant, testing and continuously improving security. The hardware, network and infrastructure are completely redundant. The data security is optimised by firewalling, authorised access procedures, back up services and continuous monitoring.

Our data centers are qualified according to US/EU GxP regulations. Additions and or modifications to either infrastructure or customer-dedicated environments are performed under stringent Change Control to secure qualified status.

We apply advanced risk management techniques to identify, address and mitigate potential risks. This ensures that our data centers are assessed, that servers are installed in a controlled way and qualified, and that procedures are in place to maintain the qualified status of the IT Platform. Available solutions: IAAS, PAAS, GxP hosting and Enterprise private cloud.

CONSULTANCY

These days, research, development and manufacturing are largely dependent on computerized systems. The guidelines and legal standards that govern the life sciences industry specifies that information systems and technology needs to be compliant.

Iperion has trained an excellent team of consultants, engineers, and project managers in regulatory compliance, safety, and quality.

Validation, qualification, technical and operational support are with Iperion in one hand. We are proud to say that all staff speak the language of the life sciences industry. With years of experience we are known for our unique solutions and professional services.

Iperion has trained an excellent team of consultants, engineers, and project managers validation, quality management, regulatory management, IT compliance and audits. in regulatory compliance, safety, and quality.
